

# BLOCKO

## Company Credential

# Platform Player for Everyone's Blockchain

BLOCKO was founded in 2014 by database experts who were looking for technology beyond the limits of existing databases (DB).

We are living in an era where data is as essential as crude oil. BLOCKO is striving to achieve the popularization of blockchain—the blockchain for all—where everyone is given equal information and democratization can be achieved. To achieve this goal, we are focusing on blockchain technology development, and continually launching and testing solutions and services that leverage trusted and verified data.

Since the launch of AERGO Mainnet, BLOCKO has been constantly working on developing technology and upgrading the platform. With our technical expertise, BLOCKO offers a blockchain platform customized to what businesses and individuals need, moving across the boundaries between public and private blockchains.

BLOCKO will take the lead in democratizing data and popularizing the blockchain.

# BLOCKO at a glance

CEO	Won-Beom Kim
Founded	2014. 12
Areas of business	Blockchain platform development and distribution, blockchain software development, consulting
Number of employees	68 (As of February 2020)
Products	AERGO Enterprise, AERGO Hub, INSTSIGN
Website	<a href="https://blocko.io">blocko.io</a>
Address	#16F, 331-8 Sungnam-daero, Bundang-gu, Seongnam-si, Gyeonggi-do, South Korea
Contact number	+82 31 8016 6253

## Strengths

### Blockchain Technology Specialist

- Korea's first GS-certified(ISO-compatible) blockchain platform
- Development and commercialization of our own blockchain engine and enterprise platform
- Over 60% of the employees are core developers and engineers
  - Unique strengths in blockchain software
  - Continuous development of performance, stability, ease of development, and management tools

### Greatest number of use cases in Korea, globally recognized skills

- Greatest number of successful consulting, construction, pilot projects and commercialized cases
- Blockchain platform with highest technological standard and ease of use to satisfy customer demands
- Blockchain company recognized by Gartner
  - Selected in blockchain PaaS sector alongside AWS and IBM
  - One of the only companies to be simultaneously listed in Hype Cycle of Blockchain Technologies 2019 and Market Guide

# BLOCKO and people

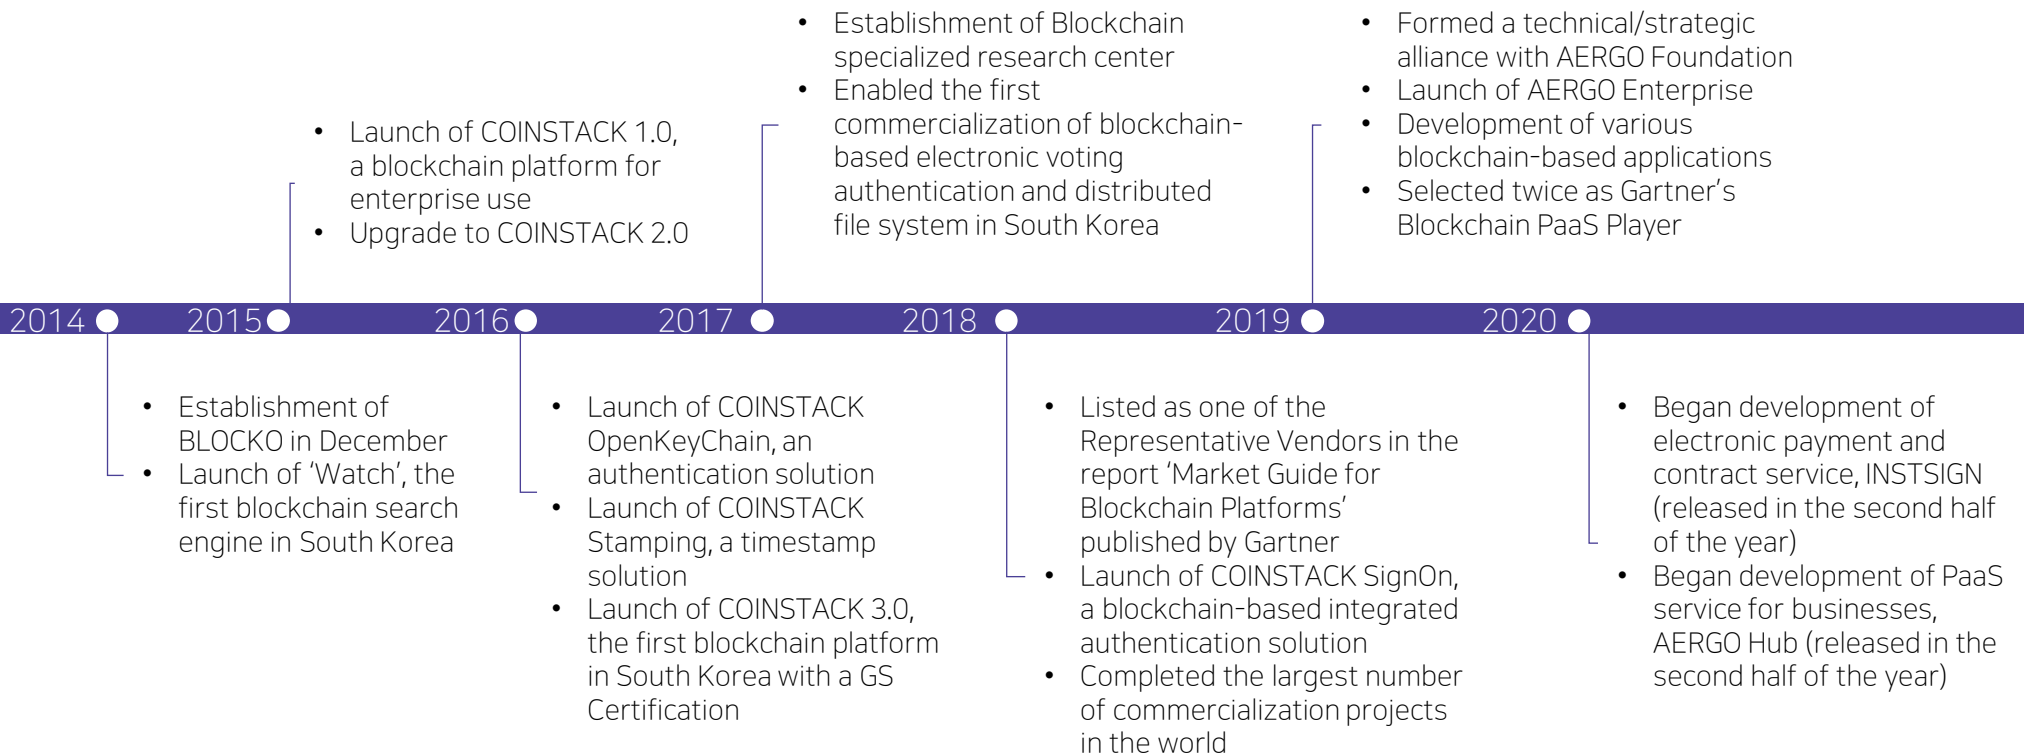

BLOCKO's organizational structure consists of a platform studio and a service studio to focus on strategic product development but will be unified from the customer's perspective. BLOCKO is optimized as a PaaS and SaaS business that is easy for clients to access and creates added value.

# History

Founded in 2014, BLOCKO provides blockchain platforms that are designed optimally for enterprise use. We maintain to have an unrivaled share in the domestic blockchain platform market for enterprise use.

# BLOCKO's products

- AERGO Enterprise
- AERGO Hub
- INSTSIGN
- Blockchain solutions
- Blockchain services

# AERGO Enterprise

BLOCKO presents practical blockchain plans and offers effective management tools with our enterprise blockchain platform. From the introduction of the blockchain to data processing, operations and management, BLOCKO's top priority is business operability.

Optimization of fast data processing	Security at the level of enterprise compliance requirements	Systemic Operations and Management tools	Improve ease of development

Able to devise a scalable business model on blockchain infrastructure

# AERGO Hub

AERGO Hub platform allows for one-click serverless distribution.

BLOCKO values the developer's ease of developing a blockchain. We are developing the AERGO Hub platform to make blockchain distribution easier and faster. BLOCKO will help you with the back end once you develop it. (released in the second half of 2020)

# INSTSIGN

This is an electronic contract and payment service platform that integrates the reliability, contactless and paperless technology of the blockchain. BLOCKO is developing it to open the market for smart contracts beyond simple image exchange contracts. It will be launched in the second half of 2020.

## INSTSIGN

### Key Functions

Web-based electronic contract platform

Smart alerts on the main contents of the contract

Contract recommendation

Legal consulting services in conjunction with law firms

Providing contract formats for all kinds of industries

Ensuring contract reliability through blockchain

# Blockchain solutions

BLOCKO offers customers optimal blockchain solutions for a variety of environments. Local and foreign conglomerates and public institutions can purchase solutions that meet their needs and use them immediately.

## e-Voting

### Areas of use

- Survey
- Voting, etc.

### Features

- Use the mobile keystore
- Multiple selection, multiple choice and open-ended items available
- Variety of clients
- Variety of installation options
- Able to specify level of personal information to be offered

### Clients

- Broadcasting stations
- Companies, organizations, and any other entities that require voting
- Public opinion research companies, etc.

Establishment of a transparent voting system, payment through cryptocurrency

## e-ID

### Areas of use

- O2O service
- Non-face to face verification
- Gateway to use other blockchain services

### Features

- Linking of various methods of authentication, such as Single Sign On (SSO), biometric identification, etc.

### Clients

- O2O service companies
- Financial services

Providing diverse authentication methods that can be linked to existing systems and laying the groundwork for introduction of blockchain services

## e-Tracking

### Areas of use

- Logistics/distribution
- Medical/pharmaceuticals

### Features

- Records various information such as shipping information, distribution environment, etc. and applies it to the existing distribution system

### Clients

- Global manufacturers
- Shipping and logistics companies
- Pharmaceutical companies

Transition of logistics/SCM from paper to paperless documents. Storage of information on the entire logistics flow

# Blockchain services\_AERGO GEM

A stable token service based on AERGO Mainnet, this distribution reward service stably guarantees a value against a specific currency. Through AERGO GEM, various organizations and companies can establish reward infrastructures with ease. It can be easily used by companies that are concerned about the scalability of points currently in operation, or local governments and public institutions that need to issue local currency.

## ※ Example of service

Advertising platform B-Tree pays reward points to end users of partner game companies in 'AERGO GEM'. Users can convert their AERGO GEM at Btrade Virtual Currency Exchange to AERGO ERC20, as well as exchange it to Korean won. BLOCKO provides the technology and infrastructure for AERGO GEM issuance and distribution, as well as swap services and exchange rate information for AERGO GEM and AERGO ERC20.

Earn points in stages through various missions

Apply for easy and simple conversion of points earned

# Blockchain services\_AERGO TSA

This is a timestamping service on the web that easily verifies authentication using blockchain. Based on AERGO Mainnet, it issues timestamps for all digital content to prevent source verification and data forgery. Users can save digital content hash values of different file types, including general files, text and image files, and electronic documents, in the blockchain. Subsequently, they can search for and view the information values of the source.

## Use of data timestamping

### Digital Copyright

Proof and management of digital content, which is an intellectual property right

### Enterprise Business

Protection of original data with real-time timestamping instead of recovering lost data in the enterprise

### Research and Project Data

Minimization of the likelihood of forgery through batch timestamping function for mass data

### Development Code Audit and Proof

Prove that the code has not been modified by registering it with AERGO TSA

### Healthcare Industry

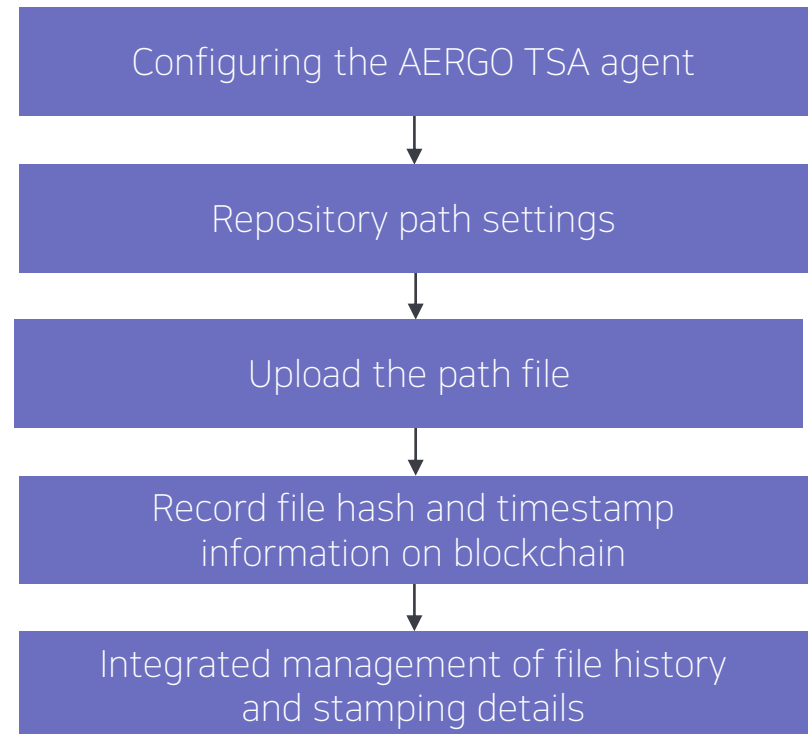

Timestamping is applied to each patient's medical record and stored in a blockchain for safe management

### Financial Data

Use blockchain to verify financial data where consistency between linked information is paramount

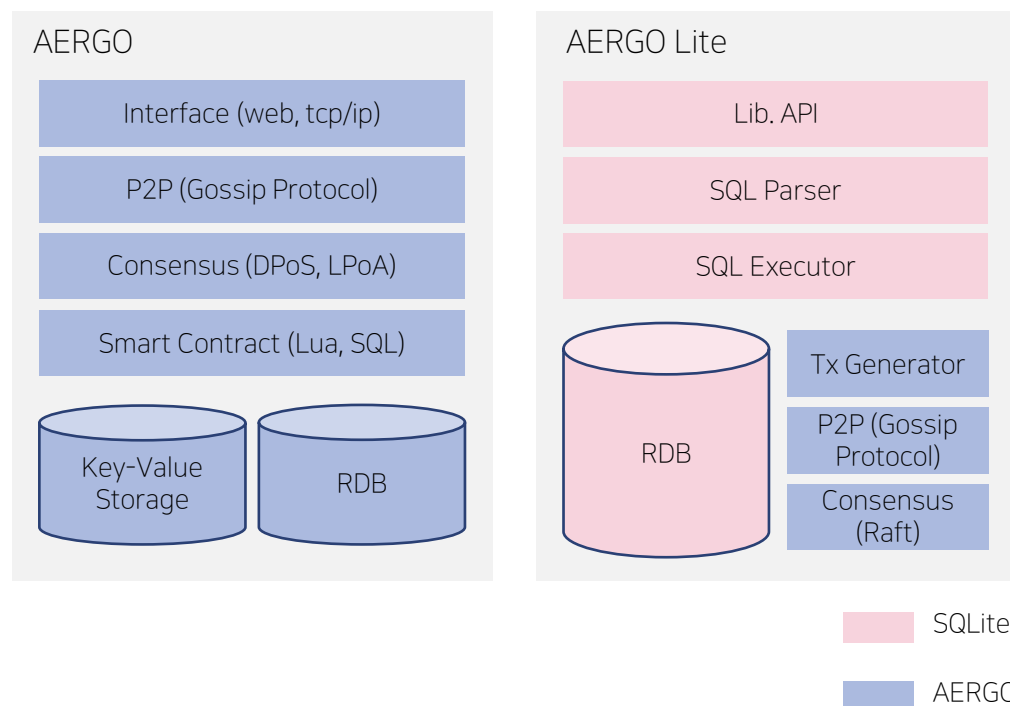

## AERGO TSA usage process

# Blockchain services\_AERGO Lite

This application uses SQLite and is a platform that uses blockchain protocol to share or backup the contents of a specific table. It is easy to build a distributed IoT infrastructure that is based on blockchain.

## Comparison between AERGO and AERGO Lite

## Strengths of AERGO Lite

1. Seamless integration with SQLite

2. SQL support based on SQLite for optimized development

3. Powerful data synchronization without separate implementation

# Clients and partners

- Clients
- Partners

# Clients

BLOCKO is the blockchain company with the largest reference in Korea. We want to add trust to data with the blockchain and add value to data that has been trapped. More data is shared transparently between individuals, businesses and governments, enabling 'destructive collaboration' without boundaries.

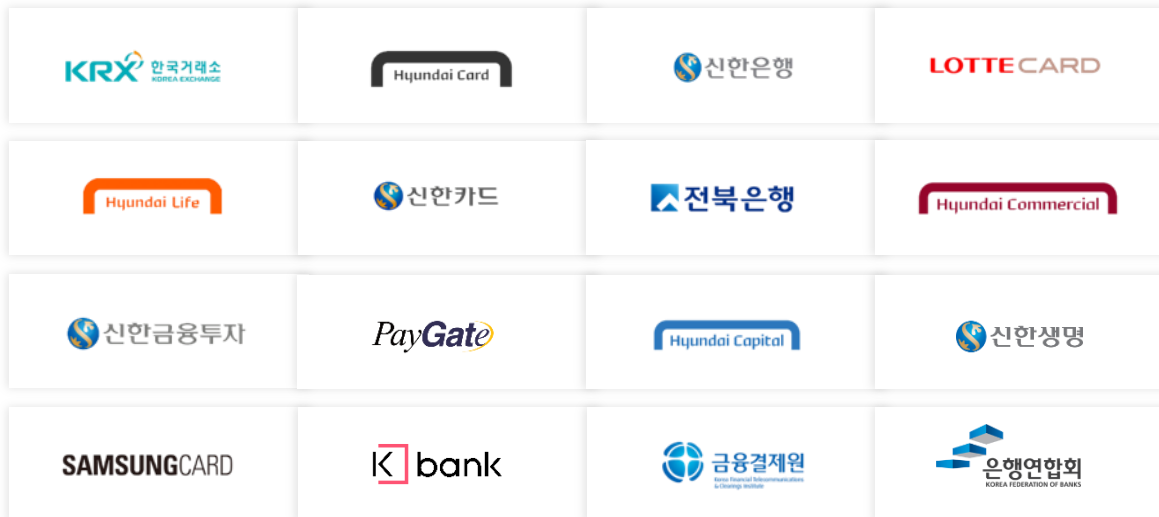

## ENTERPRISE

## PUBLIC SERVICES

## FINANCIAL SERVICES

# Partners

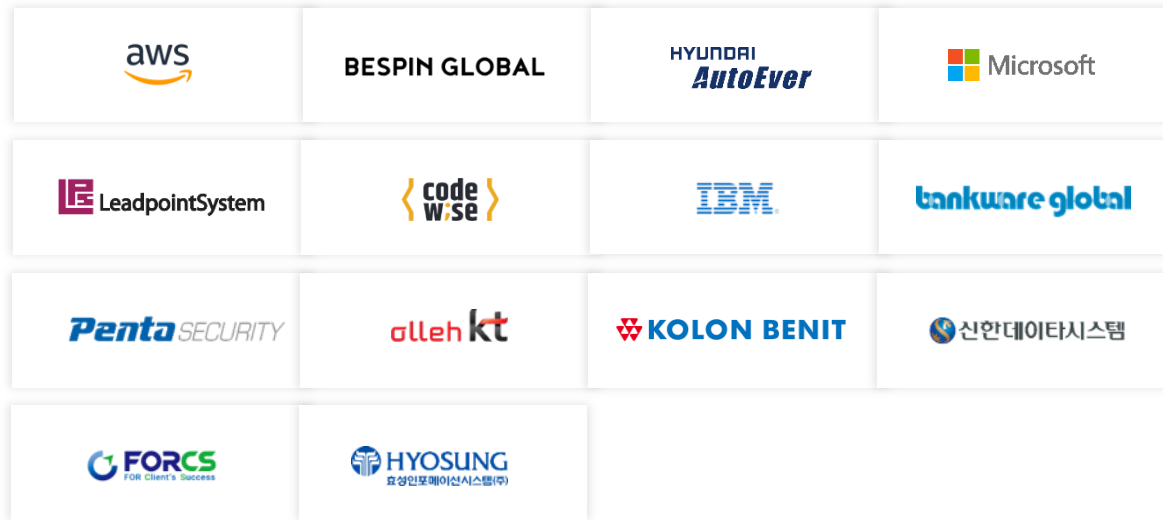

From infrastructure (cloud, network) to consulting, reselling and deployment, BLOCKO collaborates with partners experienced with all areas of enterprise blockchain.

BLOCKO's partner programs are divided into three categories.

- 1) ISV/IHV: Programs that support ISV and IHV businesses in developing, testing and building their products based on 'AERGO Enterprise'
- 2) Programs that support consulting and SI businesses in redesigning and building services for customers based on 'AERGO Enterprise'
- 3) Programs that help domestic and foreign resellers effectively supply 'AERGO Enterprise' and basic services.
